Publications of the United States National Museum

The scientific publications of the United States National Museum include two series, *Proceedings of the United States National Museum* and *United States National Museum Bulletin.*

In these series are published original articles and monographs dealing with the collections and work of the Museum and setting forth newly acquired facts in the field of anthropology, biology, geology, history, and technology. Copies of each publication are distributed to libraries and scientific organizations and to specialists and others interested in the various subjects.

The *Proceedings*, begun in 1878, are intended for the publication, in separate form, of shorter papers. These are gathered in volumes, octavo in size, with the publication date of each paper recorded in the table of contents of the volume.

In the *Bulletin* series, the first of which was issued in 1875, appear longer, separate publications consisting of monographs (occasionally in several parts) and volumes in which are collected works on related subjects. *Bulletins* are either octavo or quarto in size, depending on the needs of the presentation. Since 1902, papers relating to the botanical collections of the Museum have been published in the *Bulletin* series under the heading *Contributions from the United States National Herbarium.*

This work forms number 267 of the *Bulletin* series.

CARL JOHN DRAKE

1885-1965

During the 51 years of his life as an entomologist, Carl J. Drake made a lasting impression with his work and contributions to the knowledge of Hemiptera. The family Tingidae was his first love, with semi-aquatic and aquatic groups not far behind; he made some scientific contribution, however, to almost every major family of the Hemiptera. His magnificent collection and library are housed in the United States National Museum.

Dr. Drake was born and raised on a farm in Eagleville, Ohio, on 28 July 1885, and died in Washington, D.C., on 2 October 1965. He earned his Bachelor of Science and Bachelor of Pedantics degrees at Baldwin-Wallace College (1912) then, at Ohio State University, earned the degrees of Master of Arts (1914) and Doctor of Philosophy (1921). As a graduate student and until 1922 he was on the staff of Syracuse University.

As head of the Department of Zoology and Entomology at Iowa State University, Ames, Iowa (1922-1946), his positions included those of State Entomologist and head of the Entomology Section of the Agriculture Experiment Station through the depression and war years. This was a most difficult period in the history of mid-western agriculture because of drought, grasshopper plagues, chinch bug outbreaks, and the destruction of crops by Hessian flies, army worms, and the European corn borer. Dr. Drake's superior entomological knowledge aided him in combating these pests both biologically and chemically. Paper barricades and creosote stopped the flightless immature chinch bugs from migrating from infested fields to fresh crop fields. A statewide poison-bran project destroyed the grasshoppers and "fly free date" planting methods helped the wheat crop escape damage from the Hessian fly. He educated the general public to the problem at hand and worked in close cooperation with the farmer and local, state, and federal governments to bring Iowa and the Nation through these crises.

In 1946 Dr. Drake was relieved of all these responsibilities and concentrated on the taxonomy of Hemiptera. The title of Honorary Research Associate of the U.S. National Museum was bestowed upon him in 1957, and he was then able to devote his time entirely to research. A bachelor whose life centered around his work, he spent twelve hours a day at the museum, six and a half days a week. (How disappointed he was to learn the museum was closed on Christmas day!)

Most of his efforts were directed toward the description of new genera and species. He enjoyed having these illustrated by talented scientific artists. The morphological study of the family Tingidae (Drake and Davis, 1960) and the catalog of the Tingidae (Drake and Ruhoff, 1965) are a memorial and tribute to Carl J. Drake, who was the author of the overwhelming majority of tingid taxa.

This paper consists of Carl J. Drake's complete bibliography and an index to new names introduced by him. Many of his 519 papers, which were written while he was state entomologist, concern the agricultural and economic problems of insect pests. These papers are not indexed herein since no new names were introduced in them.

Two comprehensive obituaries of Dr. Drake have been published:

INDEX

NEW NAMES introduced by Carl J. Drake appear in **bold face** type. The arrangement is alphabetical by order, family, genus, and species. Since the greater part of his work dealt with Tingidae and a complete cross-reference index was included in *Lacebugs of the World: A Catalog (Hemiptera: Tingidae)* (Drake and Ruhoff, 1965), no attempt has been made to duplicate this work with another index.
